

# ELIMINATE YOUR ENERGY BILLS WITH HOMEMADE SOLAR PANELS

Your energy bills can be eliminated if you know how to install your own homemade solar panels. But then not everybody who wants to harness free solar power to generate electricity is able to. Many have failed. Something have went wrong.

Some have managed to generate their own solar energy but they were unable to supply enough energy to their home so they can be self-sufficient. And they are still struggling to find out why. Compared to those folks who do nothing but complain about exorbitant electricity bills, they are much better.

Many of us hate to pay our electricity bills. But not many of us bother to do something about it. If you are reading this, you are surely not in this category, so I know you are someone who takes action to make your life better. Therefore I'll share with you some simple steps that many people have taken to build homemade photovoltaic panels that can really take their house off-grid.

Start with doing some research. This helps you appreciate how others have benefited from using solar power. It gives you a feel that it's indeed possible to eliminate your energy bills. This objective is indeed achievable but things may happen to go slow at the start so have some faith.

When you have finish your research, the next thing you should consider is to purchase

a guide which will show you exactly what to do so that you can take your home off-grid. Do not try to figure things out yourself as those who do that usually fail.

Many of them made expensive mistakes while the rest simply go around in circles. And when it took them too long to complete their project, they give up.

Learn from those who failed. An installation guide usually costs less than \$50 and it contains insider tips on how to build a professional-looking photovoltaic panel at one tenth the cost of retail models. If you were to figure things out yourself, you need to get very lucky to complete your project successfully. Yet the chances are people will end up paying hundreds of dollars for mistakes that could be avoided with a \$50 guide.
