

A DESCRIPTION ON VOIP AND VOIP HARDWARE

Ip Phones

An IP Phone or VoIP phone uses a technology which is called Voice over IP that is "Voice over Internet Protocol" also known as VoIP in order to make and transmit telephone calls over an internet protocol network. This technology allows people to make and receive phone calls using the internet service.

The IP phone allows you to make and receive calls using your internet connection.

This service is being used widely all over the world and for some good reasons.

The most important reason being, you do not have to use the conventional telephone network, which has their own limitations, like you need to pay extra for making an ISD call. When it comes to IP phones, the charges are negligible. At PABX Warehouse, we offer the best iServ WH140 and Voip Phones at affordable price. Besides there are various other technical benefits which you can avail using an IP phone.

A VoIP system simply needs to be plugged into a local area network port. The IP phone then automatically connects itself to the Voice over Internet Protocol system. The internet protocol phone maintains a record of the numbers dialed like any other conventional phones.

Gigaset

Gigaset is Germany based company and they specialize in manufacturing various kinds of phones. One of their most admired products is IP phones. Gigaset ip phones, besides allowing you to make calls over internet, offer some additional services, like

- a) They allow making 3 calls at the same time.
- b) They offer a high definition sound quality
- c) You can access your Face book account, check your emails and also visit sites like eBay.
- d) They are energy savers.
- e) They have a large color display

Over the years Gigaset has made a name for itself in the field of telecommunication and their Iphones are being widely used all over the world.

Gigaset Ip Cordless Phones are also very popular and like any other conventional phones; their cordless phones are much expensive compared to ordinary phones.

Hardware for VoIP

In order to make and receive telephone calls over the internet, you need few devices. Here is a list of VoIP Hardware

- a) Telephone sets
- b) Voice over Internet Protocol Routers

c) Computer handsets

d) Computer headsets

Using VoIP service is gaining popularity all over the world. These days making an international gigaset ip cordless phones call is no longer a matter of concern as long as you have an internet connection at your disposal.
