INTERNAL ERROR WHICH OCCUR DURING OST2PST CONVERSION

MS exchange has given a secured professional mailing environment to the corporates due to which they can set security on the incoming and outgoing communication of the organization. The file extension of the exchange user on the client end is .OST, all the mails which are delivered to the client from the server are of .OST extension.

The disadvantage of using exchange server is that .OST extension file becomes inaccessible once the user moved out of the exchange arena or the mail account of the user is removed from the server end .In such situation user of the exchange server becomes helpless as the user cannot use the there exchange data in such situation, to make access of there data user can take the help of third party OST Converter tool thereby changing extension of the file into the .PST and thus making them accessible. But it have been noticed that several people go for the free OST to PST utility so as to save coasting involve in the recovery of the data but they often end up their recovery with the an error message (code 0000000E)this code shows the internal error while recovering the .OST mail.

The reason behind this message is that the free OST toPST conversion utility are mostly designed for 2000 OST files version but most of the user of the MS exchange server have upgraded themselves into the OST file of version 2003 or above and thus when they use such utility for the recovery of the data often stuck with the OST2PST internal error message and also with the risk of permanent losing of the data . So the best solution during the data loss condition is to the go for the efficient OST to PST coverter tool which efficiently recovers your lost data. If you can get back your data with full accuracy by spending a few penny than its is a better idea rather than permanent losing of your data. The excellent recovery for the OSTtoPST not just recover your data accurately but also a rapid recovery utility.

Feature of the OST2PST Converter utility.

The utility is capable of complete recovery of .OST data: email, notes, messages, contacts, tasks, draft, journals, and appointments etc
