What can be measured?

A Refractometer can be of several types and can be used for several different purposes. A Refractometer is usually used to measure,

Specific gravity

Baume

Brix

Refractive index

Urine for dehydration

Uses of Refractometer

The industrial refractometer that we sell at exceptional prices is basically useful for industries that deal with beverages and other food products. Here the refractometer is used to measure the sugar content in the scale of brix in the food. The device helps in analyzing the amount of sugar in the solid or liquid form of edible content.

Refractometers are useful in the field of sports as well. Athletes use the modern version of the device to measure hydration in hot and humid weather conditions. The refractometer is also essential for keeping track about the health conditions of workers who work in similar hot environmental conditions.

A Refractometer finds its usage in the field of medical science as well. Veterinarians, breeders and people involved with animals often use refractometers to measure the quality of colostrums in animals. This measurement is usually done in the scale of either brix, baume, salinity, refractive index or specific gravity.

Why buy from us?

Test Equip provides with 100 percent genuine equipments that come with warranties. We provide you with nothing but the best quality devices that you can rely upon. We supply you with devices from leading global brands like Starr and Atago. Our instruments are high-ranged, handy and easy to use.
