

# A BRIEF NOTE ON MODERN COMMUNICATION AND WIRELESS HEADSETS

## Headsets

These days computers are not only used for preparing documents. The use of computer has gone far beyond that. It is now used for entertainment which includes music, movies; it is used for communication; and modern computer based communication is not just about typing messages and sending them across. The communication system has made a tremendous development over last fifteen to twenty years and now, you have the luxury of speaking to someone through your computer using internet as the medium of communication. Voice chats for example; you want to speak with someone located few thousands of miles away from you, what option you had earlier? An ISD call, which would have been far too expensive for you. Now a day, you can speak to that person over internet, and you do not have to pay any extra charge for it. Now, how would you speak? I mean what would be the medium of communication? Here come headsets.

All you need to do is to attach it to your computer, configure it and you are ready to do. These devices have two sections, one that is attached to either of your ears and a mouth piece that allows you to speak. Since everything these days has become cordless, headsets are no exception. Wireless headsets are the most popular choice

among the users as there is no hazards of wires, instead it has an adapter which needs to be plugged in to one of the computer's USB port and you are ready to go. You can now communicate while you are doing some other works away from your computer. If you are searching for wireless headsets, then you can find wireless headsets on whole sale over the internet.

### **Professional Headsets**

Basically there is no difference between a normal and a "professional head set". The only differentiating factor is, professional office headsets are smaller in size in order to facilitate the storage. Office headsets are mainly used in call centers or any such organization which is driven by communication. The communication system has made a tremendous development over last fifteen to twenty years and now, you have the luxury of speaking to someone through your computer using internet as the medium of communication.

### **Modern Communication**

Talking about communication, VoIP phones are said to be a revelation in the telecommunication industry. These phones allows you to dial numbers and make calls to any one located at any corner of the world. All you need to have a stable internet connection and few other hardware, a router for example.
