

# Domain Name Status Codes

Whois records show who is responsible for a domain name and other key information. In addition to the owner and contacts for a domain, Whois records show the domain name's status. Each domain record has at least one status code but multiple statuses are permissible. Status codes are useful to determine why your domain isn't working, whether your domain is locked to prevent unauthorized domain transfers, and when a domain will be dropped. You can determine any domain's status by performing a whois lookup on the domain. Here is a list of status codes.

**ACTIVE:** The registry sets this status. The domain can be modified by the registrar. The domain can be renewed. The domain will be included in the zone if the domain has been delegated to at least one name server.

**REGISTRY-LOCK:** The registry sets this status. The domain can not be modified or deleted by the registrar. The registry must remove the REGISTRY-LOCK status for the registrar to modify the domain. The domain can be renewed. The domain will be included in the zone if the domain has been delegated to at least one name server.

**REGISTRAR-LOCK:** The sponsoring registrar sets this status. The domain can not be modified or deleted. The registrar must remove REGISTRAR-LOCK status to modify the domain. The domain can be renewed. The domain will be included in the zone.

**REGISTRY-HOLD:** The registry sets this status. The domain can not be modified or deleted by the registrar. The registry must remove the REGISTRY-HOLD status for the registrar to modify the domain. The domain can be renewed. The domain will not be included in the zone.

**REGISTRAR-HOLD:** The sponsoring registrar sets this status. The domain can not be modified or deleted. The registrar must remove REGISTRAR-HOLD status to modify the domain. The domain can be renewed. The domain will not be included in the zone.

**REDEMPTIONPERIOD:** The registry sets this status when a registrar requests that the domain name be deleted from the registry and the domain has been registered for more than 5 calendar days (if the delete request is received within 5 days of initial domain registration it will instead be deleted immediately). The domain will not be included in the zone. The domain can not be modified or purged; it can only be

restored. Any other registrar requests to modify or otherwise update the domain will be rejected. The domain will be held in this status for a maximum of 30 calendar days.

**PENDINGRESTORE:** The registry sets this status after a registrar requests restoration of a domain that is in REDEMPTIONPERIOD status. The domain will be included in the zone. Registrar requests to modify or otherwise update the domain will be rejected. The domain will be held in this status while the registry waits for the registrar to provide required restoration documentation. If the registrar fails to provide documentation to the registry within 7 calendar days to confirm the restoration request, the domain will revert to REDEMPTIONPERIOD status. The domain status will be set to ACTIVE only if the registrar provides documentation to the registry within 7 calendar days to confirm the restoration request.

**PENDINGDELETE:** The registry sets this status after a domain has been set in REDEMPTIONPERIOD status and the domain has not been restored by the registrar. The domain will not be included in the zone. Once in this status all registrar requests to modify or otherwise update the domain will be rejected. The domain will be purged from the registry database after being in this status for 5 calendar days.
