

# HTML5 : ASIDE ELEMENT TUTORIAL

## Introduction

---

In this page we have discussed Description, Usage, Attributes, Example and Result, Compatibility of *HTML5 aside element*.

## Description

---

The HTML Aside Element (<aside>) represents a section of a page containing not the main content of the page but some content which is indirectly related to the main content.

A sidebar in a webpage, containing associated links, profile information, advertisement display etc. are good example of the kind of content you can enclose in aside.

## Usage

---

```
<aside> <p>The author is a well known environmental scientist.</p> </aside>
```

## Whether start and end tag are required

---

Both start and end tag are required.

## What an aside element can contain

---

Text or embedded content.

## Which elements can contain aside element

---

Any element that may contain text or embeded content.

## Attributes

---

aside element does not have any other attributes than the global attributes (accesskey, class, contenteditable, contextmenu, dir, draggable, dropzone, hidden, id, lang, spellcheck, style, tabindex, title), common to all elements.

## Example

---

[view plainprint?](#)

```
1. <!DOCTYPE HTML>
2. <html lang="en">
3. <head>
4. <meta charset=utf-8>
5. <title>HTML5 aside example</title>
6. </head>
7. <body>
8. <aside>
9. <p>The author is a well known environmental scientist.</p>
10.</aside>
11.</body>
12.</html>
```

## Result

---

The author is a well known environmental scientist.

## Compatibility

---
